Certified to UL 60335-2-40  
UL 60335-1

Conforms to CSA C22.2 #60335-2-40  
CSA C22.2 #60335-1

Unico products comply with the European regulations that guarantee product safety.

# DESIGN & SPECIFICATIONS

## Model Number Key

V2430B-1EC2BXC1	Refrigerant Type 1=A2L
	Coil Coating 0=no coating C=E-coated
	Heating Coil X=non included H=hot water coil included
	Cooling Coil B=ac/heat pump coil, 3-row E=ac/heat pump coil, 4-row C=chilled water coil
	Motor Type, Power Supply Revision EC2=Variable Speed, 1, 2, 3, etc. 1 ph, 50/60 Hz, 120/208-230 V
	Configuration B=Both left and right hand (universal)
	Nominal Cooling Capacity Range 2430=24000 to 30000 Btu/hr (7.0 to 8.8 kW) 3036=30000 to 36000 Btu/hr (8.8 to 10.5 kW) 3642=36000 to 42000 Btu/hr (10.5 to 12.3 kW)
	Model Series V=Single piece vertical fan-coil unit

## APPLICATIONS

The Unico System is a complete indoor comfort system that includes an indoor fan coil unit and small duct system. The fan coil unit and duct system were designed to operate together to provide the proper airflow in every installation. The conditioned air is supplied through a series of small diameter ducts as a stream of air that entrains and mixes with the room air. This process of aspiration produces a more even temperature distribution in the room than a conventional system.

The Unico vertical air handler Unit is a compact one-piece fan coil unit in a vertical up-flow configuration.

For cooling, the unit is designed for R-454B or R-32 refrigerant (both A/C and Heat Pump) or a chilled water coil. For heating, the unit offers an optional hot water coil or a separately mounted electric heater (Refer to Bulletin 30-34 for proper heater selection).

## CABINET CONSTRUCTION

The cabinet is fully insulated with 1in (25mm) closed cell foam rubber insulation. The cabinet is constructed of 22 gauge (0.7-mm) galvanized steel with removable access panels on the front for ease of service. See dimensional drawing.

Fan coil ships with a 1 inch (50 mm) MERV 7 pleated filter. It can be upgraded with a higher MERV filter either 1 or 2 inch (50 or 100 mm).

## FEATURES AND CONTROLS

The fan coil unit includes an efficient variable-speed electronically commutated motor (ECM), control box with the S-M-A-R-T<sup>1</sup> control board (SCB) and a Wi-Fi enabled communications board.

*Balanced wheels* – All blower wheels are individually balanced.

*Direct drive motor* – The wheel is mounted directly to the motor shaft to improve drive efficiency and lower costs.

*Shaft key* – The wheel is attached to the motor shaft using a square keyway instead of a set screw.

*Quick motor replacement (QMR)* – The QMR feature is a quick twist-and-lock motor mount for easy maintenance. The motor is mounted to the inlet ring which is attached to the blower housing with six screws through twist-lock keyholes. When the motor or wheel require service, the entire assembly may be removed as a whole.

<sup>1</sup> Software Managed Airflow Rate and Temperatures

*Separate control box* – The control box is separate from the cabinet (ships inside the cabinet) for easy accessibility. It may be mounted to the top or front of the cabinet or even on a wall, whichever is more convenient. Knockout and starter holes for the screws are provided to assist in mounting.

*Control voltage transformer* – a 48VA 24-volt transformer provides control voltage power to the thermostat, electric heaters, and other optional equipment.

*Heat pump AFS bypass* – removes the anti-frost switch (AFS) from the circuit during heat pump heating mode which eliminates nuisance shutdowns during defrost mode.

*Modes of operation* – The SCB control board has 6 independent modes of operation, each with its own programmable airflow and RPM limit settings (Fan-Only, Low-Cool, High-Cool, Low-Heat, High-Heat, and Emergency-Heat).

*Soft-start and soft-stop* – For quieter operation, the unit will slowly ramp the motor from stop to full speed, and vice versa.

*Constant airflow* – The EC control will deliver the airflow requested without any user adjustments to the duct system or requiring the user to measure the amperage.

*Optimized for efficiency and sound* – The EC control will use the lowest motor speed to achieve the required airflow, which minimizes sound and maximizes electrical efficiency.

*Pre-set airflow rate* – The SCB is pre-programmed with two different air flow rates for the High-Cool Mode. These rates are based on the nominal tonnage of the unit (See the *Applications* section) and can be selected with a board mounted switch. The airflow for each of the six different airflow control modes are a fixed percentage of the selected High Cool airflow.

*Wirelessly configurable (EC2)* – The airflow for each mode of operation is adjustable to any value between the blower minimum and maximum by connecting to the SCB's Wi-Fi board with a personal device, such as a smart phone

*Point-to-point wiring* – The control boards have separate terminals for the thermostat, electric heater, outdoor condenser and other options for easy wiring and troubleshooting.

*Screw terminal connections* – terminal blocks with large screws and wire washers to securely connect the control wires.

*Electric heater interlocks* – The ECM control board includes three electric heater safety lockouts. The lockout prevents the heaters from operating when there is no signal for fan or if the airflow is too low. This prevents the heating elements from overheating, which can severely reduce their useful life.

The other lockout prevents the electric heater third stage from operating if the heat pump is on. This prevents nuisance shutdowns from overheating the electric heater. This feature can be added to the ST control box by using an outside thermostat.

*Boiler relay* – The SCB includes a separate dry-contact relay (HotW) that can be used to turn on the boiler, boiler pump, or hot water coil valve when the system is running in heating mode

*Chilled water relay* – The control box includes a separate dry-contact relay (ColdW) to turn on a chiller or zone pump when the system is running in Cooling mode.

*Fan cycling* – The control board includes a separate switch to provide periodic cycling of the fan. This will minimize or prevent condensation in the ducts located in unconditioned spaces during winter, or to provide fresh air if the system is connected to a fresh air source.

*EAC, ERV, or HRV relay* – For the optimum in indoor air quality, the control board includes a dry-contact relay to turn on an electronic air cleaner, energy recovery ventilator, or heat recovery ventilator any time the fan is on, or to control a fresh air damper for ventilation per ASHRAE 62.2-2010.

*Potable water circulation* – For improved health and safety, the control board provides a switch-selectable feature to turn on the boiler pump periodically (if installed as part of a domestic hot water system) to prevent the formation of stagnant water.

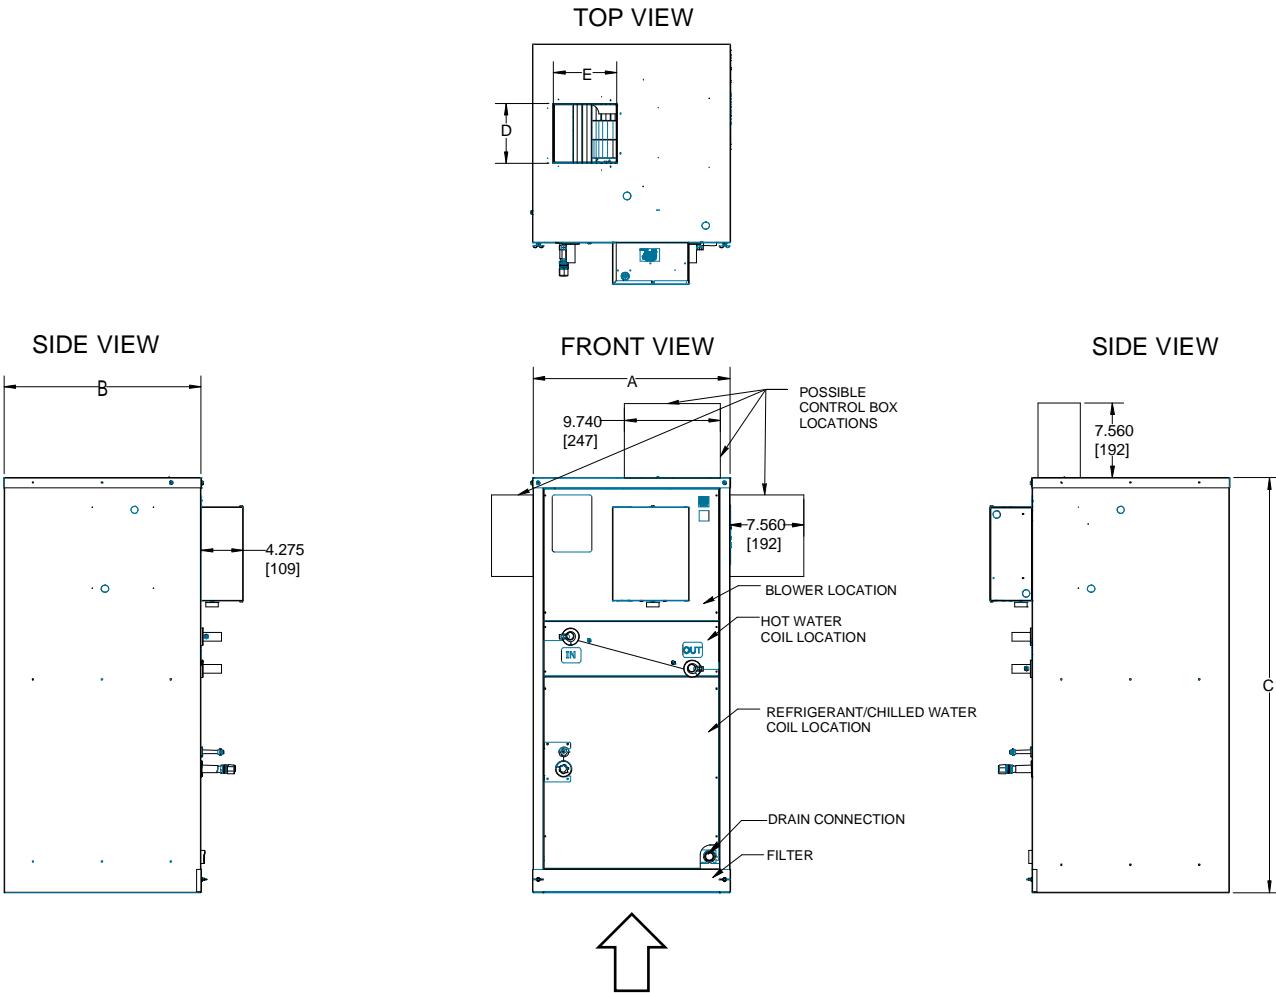

*Humidifier integration* – The control board includes a humidistat input with a humidifier output. If the humidistat calls for humidity, the humidifier output will turn on. It will also turn on the blower at High or Low Heat airflow (User-selectable) if the fan is not already running.

*Air-to-water heat pump (heat pump chiller) compatibility* – For systems with multiple air handlers connected to one AWHP. This feature allows one air handler (Leader) to control the mode of operation (heating or cooling) of other connected indoor units (Followers) to avoid runaway cooling or heating.

*Low airflow indicator* – The S.M.A.R.T. control board (SCB) includes an indicator light that signals the user if the desired airflow is not being met. This is usually caused by a restrictive duct system or too few outlets.

*Optimized for zoning* – The ECMconfig software includes programmable motor speed limits to prevent the motor from over-speeding as zone dampers are closed without the need for a bypass damper. Refer to the Unico Tech Bulletin on zoning for more information.

*Laptop troubleshooting* – The ECMconfig software will also provide the user with feedback indicating the actual airflow, motor speed, communication status between the boards and the motor, and the state of various inputs and outputs.

**DIMENSIONAL DATA**

Note: The control box, expansion valve and condensate trap ships inside the spare parts box.

Model	A	B	C	D	E
V2430	20.0 (508)	20.0 (508)	42.0 (1067)	6.0 (152)	6.4 (162)

Recommended No. of Outlets		14	19	23	27				

**WARNING!**

To prevent injury or damage from high temperatures, do not install floor outlets when operating with discharge temperature above 160°F (71°C).

**Caution**

To prevent damage to the EC motor from overheating, do not operate in the shaded region where discharge temperature is more 150 °F (65 °C).

Recommended No. of Outlets		15		23		27		30	

Capacities are based on 70°F (21°C) return air temperature ( $T_{in}$ )

Conversion Factors: MBH = 1000 Btu/hr, 1 kW = 3413 Btu/hr

Recommended number of outlets is based on 33 CFM (60  $m^3/h$ ) per outlet for a quiet system.

### WARNING!

To prevent injury or damage from high temperatures, do not install floor outlets when operating with discharge temperature above 160°F (71°C).

### Caution

To prevent damage to the EC motor from overheating, do not operate in the shaded region where discharge temperature is more 150 °F (65 °C).

<b>Recommended No. of Outlets</b>			15		18		21		24						

**WARNING!**

To prevent injury or damage from high temperatures, do not install floor outlets when operating with discharge temperature above 160°F (71°C).

**Caution**

To prevent damage to the EC motor from overheating, do not operate in the shaded region where discharge temperature is more than 150 °F (65 °C).

## ACOUSTICAL DATA

Sound is always present and is important to comfort. Understanding how sound is defined is essential to understanding how to design a proper Unico System. Sound is defined as a physical disturbance in pressure that is detectable by the human ear. Sound is usually presented as Sound Pressure Level (SPL) in decibels (dB) but can also be presented as Sound Power Level (SWL). Sound pressure is what you hear so it is the only value that is important to the occupant. However, determining the value is difficult because it is dependent on the surroundings and distance from the sound source. For instance, a carpeted room is much quieter than a room with wood floors.

For the Unico System, it is also important to consider sound transmission losses through ceilings and walls. The blower is never placed in the occupied room, so the sound is always less than the published value. This reduction in sound level depends on the construction of the ceiling or wall. For instance, a ceiling structure made of gypsum board with insulation above it will have a much greater sound transmission loss (TL) than a dropped ceiling without insulation.

The data shown in this catalog was measured in a large room with hard surfaces for the walls and floor. It is considered to be the worst case (i.e. loudest). The sound level in the occupied space will always be considerably less than this, depending on where the unit is located. To determine the actual sound level, subtract the TL for the barrier from the sound data of the unit. The table below shows typical TL values for common construction configurations. Subtract these values from the Unico air handler data.

Transmission Loss for Common Construction, dB

Construction Type	Frequency, Hz						
	125	250	500	1k	2k	4k	R
Sheet Metal, 24 GA	13	17	20	27	34	39	<b>18</b>
Ceiling Tile, mineral fiber	13	21	27	31	35	40	<b>20</b>
Gypsum Frame wall	12	23	31	38	42	37	<b>20</b>
Gypsum Frame wall, insul.	15	30	32	43	46	38	<b>23</b>
Wood Floor, uninsulated	22	28	37	43	46	43	<b>25</b>
Wood Floor, insulated	29	40	51	57	60	58	<b>26</b>
Concrete Block, 190-mm	38	41	43	50	55	61	<b>26</b>
Concrete, 100-mm (4 in.)	41	41	45	52	56	64	<b>26</b>
